- (1) First we machine all the grippers' finger to make all the tips the same angle.
- (2) Then we silver braze a thin steel plate to each gripper tip. The steel plate is machined and prepared for the Diamond Coating.
- (3) Is the finished gripper tip with a 60/80 grit Diamond.

The cost for reconditioning gripper fingers are.

Used Gripper

**We can rebuild and
Diamond Coated
your gripper finger
with a 60/80 grit**

1) To apply a diamond coating to the gripper-tip that only need a new gripping surface, the price is \$18.50 each. We remove the old gripping surface and grind the tips to make them all flat and at the same angle.

2) To rebuild a gripper finger-tip we charge \$28.50 each. We silver braze a small piece of steel to the worn thin gripping-tip to build it up, and then grind it to match the other grippers.

3) To make a new gripper-tip the can cost \$50 to \$100 depending to the quantity, shape and condition of gripper. We design a steel replacement gripper-tip piece and silver braze it to the gripper body, some time if we have space we will put a steel rivet. We then grind it to match the other grippers.
